Education

Indian Institute of Information Technology-Gwalior

Integrated Bachelor's & Master's in Information Technology

2017 – 2022

Gwalior, MP

Experience

NETAPP

Oct 2023– Present

Software Engineer-2

Bangalore, Karnataka

- Architected and implemented a distributed **Redis caching and event-driven cache invalidation system** for the entire IAM Authorizer service, **reducing end-to-end authorization latency by 95% under peak workloads while ensuring 100% data consistency** during organization mutations.
- Designed and developed a **database migration from MySQL to MongoDB**, developing custom migration scripts and orchestrating complex schema transformations to ensure zero data loss while vastly improving query flexibility and horizontal scalability for high-throughput workloads.
- Designed and developed the next-generation **IAM Authorizer in Golang**, a scalable service to improve authorization performance, concurrency, and horizontal scalability for enterprise workloads.
- Optimized **MongoDB performance by implementing index lifecycle management**, query optimization, and efficient sorting strategies, significantly improving query latency and scalability for large-scale identity datasets.
- Designed and delivered multiple **enterprise IAM capabilities, including automated user onboarding, authorization enhancements, audit logging, and air-gapped deployment support, improving platform functionality** operational efficiency, and enterprise customer experience.
- Resolved **25+ high-impact customer escalations and critical production issues**, significantly improving platform stability, service reliability, and enterprise customer experience.

DELL R&D

Jan 2022 – Oct 2023

Software Engineer

Bangalore, Karnataka

- Designed and Implemented Microservices and REST APIs as a critical component of a scalable distributed system that **facilitated seamless data processing from various Dell Enterprise servers**.
- Leveraged technologies such as **Java/JEE, Spring, Spring Boot, Python, Flask, Hibernate, RabbitMQ, Kafka, Docker, Kubernetes** and more to develop the system.
- Consistently involved in all phases of the **Software Development Life Cycle, encompassing design, development, testing (unit testing & integration testing), debugging & troubleshoot technical issues, maintenance, & monitoring**.

Skills

Languages: Java/JEE, Golang, Python

Frameworks: Spring MVC, Spring Boot, Gin, Flask, Hibernate (ORM), Spring Data JPA

DBMS: MySQL, PostgreSQL, NoSql-MongoDB

Monitoring: Dynatrace, Grafana

Testing & Automation Framework: JUnit, Mockito, Selenium, TestNG, unittest, gomock

Other Tools & Technologies: Redis, RabbitMQ, Apache Kafka, Containers- Docker, Kubernetes, Elasticsearch, Jenkins, Git, CI/CD, Git, Linux/Unix, Agile, AWS, Azure

Projects

Tinder Clone: Scalable Backend System

- The **Tinder Clone-Backend** project delivers a scalable backend system for a one-on-one matchmaking chat application, closely resembling the functionality of Tinder.
- Developed microservices (registration-svc, profile handler, feed engine, recommendation engine & other) for user registration, profile management, recommendation generation using ML models.
- Utilized Java/Spring & Python to implement functionalities and integrate microservices for Tinder Clone.
- Optimized user-data storage using PostgreSQL and recommendation storage using Elasticsearch. Implemented **geolocation based sharding** techniques for query optimization.
