SKILLS

TECHNICAL SKILLS & TOOLS

Languages: Java/JEE, Golang, Python

Frameworks: Spring Boot, Gin, Flask

Testing & Automation Framework: JUnit, Mockito, Selenium, TestNG, unittest, go-mock

DBMS: MySQL, PostgreSQL, NoSQL- MongoDB, Elasticsearch

Cloud: Azure, Pivotal Cloud Foundry, AWS

Monitoring: Dynatrace, Grafana

Other Tools & Technologies:

Containerization- Docker, Kubernetes, Git, CI/CD Pipelines, Postman, RabbitMQ, Apache Kafka,

CORE CS

Operating System, Object Oriented Programming, Computer Networking
Data Structure & Algorithms, Computer Architecture, System Design, Machine Learning

EDUCATION

IIIT GWALIOR

INTEGRATED B.TECH AND M.TECH

IN INFORMATION TECHNOLOGY

2017 - 2022 | Gwalior, INDIA

CGPA: 7.67

VKS PUBLIC SCHOOL

2016 | Moradabad, IN

CBSE XII: 86.40%

VKS PUBLIC SCHOOL

2014 | Moradabad, IN

CBSE X: 95.0%

EXPERIENCE

NETAPP | MTS-2

October 2023 - Present

- Architected and implemented a distributed **Redis caching and event-driven cache invalidation system** for the IAM Authorizer service, **reducing authorization latency by 95% under peak workloads** while ensuring data consistency during organization mutations.
- Designed and developed a database migration from **MySQL to MongoDB**, creating custom migration scripts and orchestrating schema transformations to ensure zero data loss while improving query flexibility and scalability.
- Developed the next-generation **IAM Authorizer in Golang**, a scalable service to enhance **authorization performance, concurrency, and horizontal scalability for enterprise workloads**.
- Delivered multiple enterprise IAM capabilities, including **automated user onboarding, authorization enhancements, audit logging, and air-gapped deployment support, improving platform functionality** and customer experience.
- Resolved **25+ high-impact customer escalations and critical production issues**, enhancing platform stability and service reliability.

DELL R&D | SDE

January 2022 - October 2023

- Worked on Developing various **Microservices & RESTful APIs** for building a larger scale distributed system to process the data received from various Dell Enterprise servers using **Java, Spring MVC, Hibernate, Kafka**. Involved in Designing, Implementing, Testing, Deployment, Monitoring) using Java/JEE and Python Technologies.
- Worked on **developing various microservices** to do the extraction of the highly compressed data or files, for the exchange between applications used **RabbitMQ and Kafka Message broker** for achieving asynchronous communication.

RAKUTEN | SOFTWARE ENGINEERING INTERN

June 2021 - Dec 2021 | Bangalore

- Worked on developing feature which was about to verify whether a particular website is rendering properly on different devices through automation instead of manual UI testing, by capturing location of all the components of website.
- Tech stack involved in the development are **Python, Writing Automation scripts using Selenium & Webdriver** for capturing location of elements.

PROJECT

Tinder Clone: Scalable Backend System

- Utilizing Java/Spring & Python to implement functionalities and integrate microservices for Tinder Clone.
- Developed microservices (**registration-svc, profile handler, feed engine, recommendation engine & other**) for user registration, profile management, recommendation generation using ML models.
- Optimized user-data storage using PostgreSQL and recommendation storage using Elasticsearch. Implemented **geo-location based sharding** techniques for query optimization.
